

## **EBRI Databook on Employee Benefits**

### **Chapter 8:**

#### **Individual Retirement Accounts (IRAs)**

UPDATED July 2014

This chapter looks at the account balances, contributions, rollovers, withdrawals, and asset allocation of Individual Retirement Accounts (IRAs). The data are from the EBRI IRA Database, which for year-end 2012 included 25.3 million accounts of 19.9 million individuals with \$2.09 trillion in assets. This represents approximately 33 percent to 40 percent of IRA owners and assets.

For more information on the EBRI IRA Database, see Craig Copeland, [“Individual Retirement Account Balances, Contributions, and Rollovers, 2013; With Longitudinal Results 2010-2013: The EBRI IRA Database,” EBRI Issue Brief #414 \(May, 2015\).](#)

This chapter starts with the most recent year (2012) results for average and median balances, percentage contributing and rollovers. Next, longitudinal results for these metrics are presented using two methods:

- 1) The full sample result for each year 201-2012
- 2) A consistent sample of individuals in the database each year 2010-2012.

This allows for the largest range of results for each year as well as the ability to show the growth of assets in IRAs of those accounts that are maintained over the three year period.

A section on withdrawals from IRAs and asset allocation in IRAs complete the chapter.
